

ABANOUB WAGIM IBRAHIM

Java Backend Developer

abanoubwagim@gmail.com | linkedin.com/in/abanoubwagim | github.com/abanoubwagim | +20 155 546 3140

SUMMARY

Junior Java Backend Developer with hands-on experience in building backend systems for large-scale public event applications. Graduated in BIS with exposure to event-driven architecture and real-time systems. Built backend services using Java Spring Boot, focusing on reliability, performance, and scalable design under real traffic conditions.

EDUCATION

Higher Institute for Specific Studies

Sep 2022 – July 2026

Bachelor of Science in Business Information Systems

Giza, Egypt

SKILLS

Backend Core: Java, Spring Boot, Spring MVC, Spring Security, Spring Modulith, JPA/Hibernate, Maven

APIs & Architecture: RESTful API Design, Modular Monolith, JWT, OAuth2, DTOs, Validation, Swagger / OpenAPI

Databases: PostgreSQL, MySQL, SQLite, Redis, Flyway

Messaging: RabbitMQ, WebSocket/STOMP, Event-Driven Architecture

Testing & Tools: JUnit, Mockito, Docker, Postman, Git & GitHub

Frontend: Angular, HTML, CSS, JavaScript, Bootstrap

EXPERIENCE

Ministry of Youth & Sports of Egypt | Cairo International Book Fair 2026

Dec 2025 – Feb 2026

Volunteer Backend Developer

Cairo, Egypt

- Awarded Best Volunteer by the Ministry of Youth & Sports for technical contribution and performance under production pressure throughout the project lifecycle
- Contributed to BookFairGo, a mobile app deployed at Cairo International Book Fair 2026 and used by 750k+ attendees
- Supported deployment and monitoring during live event traffic, debugging urgent backend issues under pressure.
- Maintained 99.2% uptime during the event, including peak traffic periods with over 10k concurrent users
- Collaborated with frontend and QA teams to define API contracts and resolve integration issues
- Designed an offline-first architecture using SQLite and periodic network synchronization, enabling more than 15k users to access cached event and catalog data without internet connectivity
- Optimized database access by reducing unnecessary joins and fixing N+1 query issues
- Implemented real-time event notifications using WebSocket and STOMP, delivering live updates to users with latency consistently below 500ms
- Investigated and fixed production bugs related to authentication, validation, and session handling
- Adapted API behavior based on feedback from event operations and support teams

Google Developer Student Clubs (GDSC)

Aug 2023 – Aug 2024

Volunteer Java Core Team Member

Cairo, Egypt

- Delivered 42+ technical sessions covering Java fundamentals, object-oriented design principles, Spring Boot basics, and REST API development to 175+ participants
- Mentored students in Java programming, problem-solving, and backend development through 46+ hands-on projects, providing code reviews and guidance on software design and architecture

PROJECTS

Unihub | Java, Spring boot, Spring Modulith, WebSocket, PostgreSQL, Redis, RabbitMQ, Angular

Apr 2026 – June 2026

<https://github.com/abanoubwagim/unihub>

- Accomplished a 76% Redis cache hit rate as measured by average API response time, by implementing caching strategies that reduced latency from approximately 211ms to 8ms
- Fixed a Redis caching issue that caused exceptions on subsequent endpoint calls, ensuring stable repeated access to cached data
- Designed an event-driven architecture using RabbitMQ with 6 durable queues and 4 fanout exchanges, including dedicated dead-letter exchanges
- Triggered a real-time welcome notification upon email verification using a RabbitMQ event, delivered instantly to the client via WebSocket/STOMP
- Secured login endpoints with Redis-backed rate limiting and account lockout after repeated failures
- Managed 28 Flyway database migrations with zero deployment failures, ensuring reliable schema versioning
- Wrote 286 unit tests using JUnit 5 and Mockito, providing comprehensive coverage for core business logic and improving overall code reliability
