

ABANOUB WAGIM IBRAHIM

Java Backend Developer

abanoubwagim@gmail.com | LinkedIn | GitHub | Portfolio | +20 155 546 3140

SUMMARY

Junior Java Backend Developer with hands-on experience building backend applications using Java, Spring Boot, SQL, PostgreSQL, Redis, RabbitMQ, and Docker. Experienced in developing RESTful APIs, implementing business features, optimizing database access, and building event-driven and real-time systems. Hands-on experience working in Agile teams on production-oriented systems, with a strong focus on code quality, performance, and maintainable architecture.

EDUCATION

Higher Institute for Specific Studies

Bachelor's in Business Information Systems

Sep 2022 – June 2026

GPA: 3.03 / 4.00 (V. Good)

SKILLS

Programming Languages: Java, SQL

Frameworks & Backend: Spring Boot, Spring MVC, Spring Security, Spring Data JPA (Hibernate), Spring Modulith, Lombok, MapStruct

API Development: RESTful APIs, JWT Authentication, OAuth2, Bean Validation, DTOs, Swagger / OpenAPI

Databases: PostgreSQL, MySQL, SQLite, Redis

Messaging & Real-Time: RabbitMQ, WebSocket, STOMP

DevOps & Tools: Docker, Git, GitHub, Maven, Flyway, Liquibase, Postman, IntelliJ IDEA, Apidog, Azure DevOps

Testing: JUnit 5, Mockito

Architecture: Modular Monolith, Event-Driven Architecture, Clean Architecture

EXPERIENCE

Algoora Systems | Remote

Java Backend Developer Intern

July 2026 – Sep 2026

Cairo, Egypt

- Contributed to PIMS, a Spring Boot microservices platform for pharmacy inventory and order management
- Developed and maintained RESTful APIs using Java and Spring Boot
- Implemented business features based on OpenAPI/Swagger specifications and existing business workflows
- Worked with Netflix Eureka Service Discovery to support service registration and communication between microservices
- Designed and applied Liquibase database migrations for backend features
- Collaborated with cross-functional teams in an Agile/Scrum environment, participating in development, code reviews, and Git-based workflows

Ministry of Youth & Sports of Egypt | Cairo International Book Fair 2026

Java Backend Developer Volunteer

Dec 2025 – Feb 2026

Cairo, Egypt

- Awarded Best Volunteer by the Ministry of Youth & Sports for technical contribution and performance under production pressure throughout the project lifecycle
- Contributed to BookFairGo, a mobile app deployed at Cairo International Book Fair 2026 and used by 750k+ attendees
- Supported deployment and monitoring during live event traffic, debugging urgent backend issues under pressure
- Collaborated with frontend and QA teams to define API contracts and resolve integration issues
- Designed an offline-first architecture using SQLite and periodic network synchronization, enabling more than 15k users to access cached event and catalog data without internet connectivity
- Optimized database access by reducing unnecessary joins and fixing N+1 query issues
- Implemented real-time event notifications using WebSocket and STOMP, delivering live updates to users with latency consistently below 500ms
- Investigated and fixed production bugs related to authentication, validation, and session handling

PROJECTS

Unihub | Java, Spring Boot, Spring Modulith, WebSocket, PostgreSQL, Redis, RabbitMQ, Angular

Apr 2026 – June 2026

<https://github.com/abanoubwagim/unihub>

Modular university platform connecting students, universities, and companies, featuring authentication, real-time notifications, event-driven communication, and role-based access control.

- Applied clean architecture principles to build maintainable, loosely coupled, and scalable backend modules
- Reduced API response time from 211ms to 8ms using Redis caching, achieving a 76% cache hit rate
- Designed an event-driven architecture with RabbitMQ and implemented real-time notifications using WebSocket/STOMP
- Secured authentication with Redis-backed rate limiting and account lockout
- Implemented JWT-based authentication and role-based authorization using Spring Security
- Managed 28 Flyway database migrations and wrote 286 unit tests using JUnit 5 and Mockito
- Implemented pagination, filtering, and sorting to improve API performance and usability
